Village/City	Umerkot (Rural)
Tehsil	Umerkot
District	Umerkot
Province	Sindh, Pakistan
M.O.Vs	Pictures, Referral Slip, Consent Note

“Alive healthy baby in the lap of mother is a divine blessing that brings smile worth more than billions”

For **Nageen w/o Farhad** 20 years of age, resides in the vicinity of Umerkot having low socio economic status referred on dated 17th of March, 2015 at 10.30 AM from PPHI BEmONC Centre Shewani Mohalla (Facility working with MCHIP) as a high priority patient with history of full term pregnancy, no labor progress, green liquor, diminished FHS and narrow pelvic. It was a dream that could not be possible at DHQ Hospital without unturned efforts of MCHIP team.

DHQ Hospital Umerkot known as the major source of quality health care for poor people of Umerkot had never experienced any C-section case or management of prolong labor before. Though it had a good BEmONC but even though referral for remaining O2 signal functions was common. Prior to the intervention of MCHIP there was no practice of IP, C-Section and management of Prolong labor made by health care providers to facilitate the poorest pregnant women due to lack of trained human resource and well equipped OT.

After the assessment of DHQ Hospital’s CEmONC center MCHIP team initiated its technical efforts through working on this facility with inputs of CEmONC including Roster formation, IP training, DHIS information, setup of Labor Room, OT on quality standards, development of referral linkages from other BEmONC, use of Partograph and assignment of trained human resource with help of DHO health & MS.

A crucial step that had never been taken by DHQ Hospital Umerkot put forward and saved a newborn and a mother. On receiving Nageen as a referred emergency patient in severe condition the SWMO examined her with her medical team and followed all protocols accordingly. She decided to perform C-section surgery in emergency to save both lives in the risk. This was the first decision in DHQ by Medical team to go for this surgery as their concept and inputs along with all preparations were ready to facilitate this complicated case, Nageen was operated and gave birth to a 2.5 KG healthy baby boy.

Nageen says:

“I am happy that I have got services at door step and my baby is gift of God to me in a situation when I was not able to go to a private facility and would only wait for fate “

The DHO Umerkot (Dr.G.Lal) also expressed his feelings saying “It was my dream to see DHQ Hospital as a functional CEmONC Center which DOH has made true in collaboration with MCHIP”.

The change showing the real vision and legacy of MCHIP team which they have for quality care in all Health care facilities in Public and private sector of Pakistan.

We hope the change brought many hopes for those

mothers who have stay on fork, where to go and will given message to mothers that you all are important for us .
